

1. An article enabling a spray bottle to be suspended from an ironing board
2 or other surface, the spray bottle including a neck portion to which a manually operated
spray head attaches, the spray head having an upper extent and a forward, manually
4 operated trigger, the article comprising:

a shaped body having a lower end that engages with the spray bottle and an upper
6 lip, such that when the lip is positioned on a surface, the spray bottle hangs therefrom.

2. The article of claim 1, wherein the lower end of the body includes an
2 opening that engages with the neck of the bottle.

3. The article of claim 1, wherein the body includes a curved back surface
2 opposed to the trigger, enabling a user to comfortably hold and operate the spray bottle
with the article attached thereto.

4. The article of claim 1, wherein the distance between the upper lip and the
2 upper extent of the spray head is sufficiently spaced apart to enable the spray bottle to be
hung from a variety of surfaces including ironing boards, shelves, and ledges.

5. The article of claim 1, wherein the upper lip includes a surface or feature
2 to enhance friction or holding capability.
